Guardian Setup Wizard — A.K.E.

Purpose

This guide explains your oversight role for a minor operating the Autopilot Knowledge Engine. No purchases or risky content. All sources are public/CC. Ads default to non■tracking 'house ads' until you approve any affiliate accounts.

What You Approve

- GitHub Pages hosting of a static, educational website.
- Automated daily content generation from Wikipedia CC■BY■SA with attribution.
- Optional future affiliate accounts (e.g., Amazon CA) — you hold the payout account.
- No personal data collection; no paid APIs; no scraping behind paywalls.

How to Monitor

- Visit the site's /about page for legal/attribution details.
- Check the GitHub repository's Actions tab for daily run logs.
- You can pause automation by disabling the workflow in GitHub Actions.
- For complaints or takedown requests, open a GitHub issue (public record).

Data & Storage Limits

Files larger than 100MB are blocked from commits. The site only stores lightweight text and images. Videos are not uploaded to the repository.

Contact

Use the repository's Issues tab; avoid sharing personal emails for minors.
